

Guide for Replacing the Rope Lights

Warning: Always unplug any electrical appliance before attempting any repairs.

STEP 1

Remove the fabric from the umbrella. Lay the umbrella on it side over table or workbench. Seperate the rib from the rib connector.

STEP 2

Remove the electric box cover. Locate the two wires from the rope light being replaced. Disconnect the white wire box from the circuit panel.

STEP 3

Attach a 3' piece of fishing line to the wires before removing the rope light. This will help in pulling the new wires back into the electric box. Remove the light from the rib frame and then carefully pull the rope light from the electrical box.

STEP 4

Attach the fishing line to the new wires and carefully pull the wires into the electric box then place the rope light back into the rib frame.

STEP 5

Connect the new wire box to the circuit panel.

Note: Check to make sure all wire connections on the circuit panel are properly attached.

STEP 6

Reattach the cover to the electric box and return the umbrella to an upright position. Plug in the transformer and test the light system. If satisfied, then place the fabric back onto the umbrella. You have completed the repair.
